

MUHAMMAD HAMMAD ATEEQ

Data Analyst | SQL · Python · Data Pipelines & Dashboards

Islamabad, Pakistan | +92 308 5341314 | muhammadhammadateeq@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Data analyst comfortable across the full stack of a data pipeline: writing the SQL, cleaning the data in Python/Pandas, and shipping the dashboard. Solid MySQL and SQL Server experience (**joins, aggregations, window functions, string functions**), paired with published Python tooling (**PandasTrace, PyPI, 23 passing tests**) and four live Streamlit dashboards built for non-technical stakeholders. Recognized as **Star Performer** in an RIT-supported AI-Powered Data Analysis internship. Sole developer of a normalized SQL Server banking system handling transaction history and balance operations — structured, transaction-level data close to a risk/fraud data context.

EDUCATION

BS Software Engineering — Bahria University, Islamabad, Pakistan 2025 – Present
CGPA 3.57 / 4.00 · Coursework: Database Systems, Data Structures, Statistics, Object-Oriented Programming

Intermediate in Computer Science (ICS), Pakistan 2024

EXPERIENCE

Data Analysis Intern — RIT Excelerate, Tiger STRIPES Program (Remote) Feb 2026

- Selected as **Star Performer** among all interns for analytical output; awarded Certificate of Appreciation.
- Performed end-to-end analysis on large unstructured datasets: data cleaning, transformation, statistical analysis, and insight reporting using Python and Pandas.
- Applied AI-assisted tooling to accelerate data workflows and improve the accuracy of analytical output.
- Presented findings in a structured, business-ready format for non-technical stakeholders.

PROJECTS

ApexVault Banking Management System — Microsoft SQL Server, C++17, Qt6 Desktop application

- Sole developer.** Designed the normalized relational schema and wrote every SQL query behind transaction history, balance operations, and administrative reporting, connected from C++ over ODBC.
- Built role-separated admin and customer dashboards with TPIN-protected transactions in a dual-theme Qt6 interface.

PandasTrace — Python, Pandas, pytest, PyPI pypi.org/project/pandastrace

- Built and published an open-source package that instruments Pandas method chains, logging row counts, null changes, duplicates, and memory usage at every step to expose silent row loss during cleaning.
- Shipped v0.3.2 with 23 passing pytest tests and JSON/CSV trace export for audit handoff.

Universal Data Cleaner & Visualization Tool — Python, Pandas, Streamlit Live on Streamlit Cloud

- Built an automated EDA pipeline that detects missing values, outliers, and data-type inconsistencies in uploaded CSV and Excel files, then returns charts, summary statistics, and a cleaned export file.

E-Commerce Sales Dashboard — Python, Pandas, Streamlit, Plotly Live on Streamlit Cloud

- Analyzed a 10,000+ row transaction dataset to surface revenue trends, top-performing products, and customer purchase patterns.
- Built KPI cards, category breakdowns, and time-series views with interactive date and segment filters for real-time slicing.

Airport Operations Dashboard — Python, Pandas, Matplotlib, Streamlit Live on Streamlit Cloud

- Ran time-series analysis on passenger volume and flight statistics to detect seasonal trends, peak-hour traffic, and on-time performance patterns.

Multi-Tab Spreadsheet Tracking Systems — Excel, Google Sheets Personal project

- Designed 12- and 16-tab workbook systems with formula-driven KPI calculations, cross-tab aggregation, and conditional-formatting rules so annual summaries update automatically from monthly entries.
- Implemented SPARKLINE progress visualizations, tier-threshold logic, and leap-year date handling for full Google Sheets compatibility.

Also deployed: Healthcare Data Dashboard — EDA on patient demographics, admission trends, and clinical outcome metrics. Live on Streamlit Cloud.

TECHNICAL SKILLS

Languages: Python, SQL, C++

SQL: MySQL, Microsoft SQL Server — joins, aggregations, window functions, string functions; familiarity with query optimization

Data & Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning, Statistical Analysis, ETL Pipelines

Visualization & Reporting: Streamlit, Plotly, Matplotlib, Seaborn, Excel (Pivot Tables, Lookups), Google Sheets, KPI Dashboards

Tools: Git, GitHub, Jupyter Notebook, VS Code, pytest, PyPI packaging

CERTIFICATIONS & AWARDS

Star Performer — AI-Powered Data Analysis Remote Internship, Rochester Institute of Technology (RIT) Tiger STRIPES Program, powered by Excelerate · February 2026
